

We are part of an ever changing world.

We intend to provide sustainable and cutting-edge solutions, suitable for the needs of the present and the world of tomorrow.

We pursue this goal through research and innovation. Always.

Our hydraulic pumps, developed on the basis of specific customer needs, stand out for their distinctive performance and extremely low noise.

Our History.

Settima Meccanica started its activity in 1978 with the aim of producing 3-screw pumps capable of minimizing pulsations and noise emission in the hydraulic circuit. The range was initially intended primarily for the lift market. Subsequently, the company diversified its outlet markets by introducing a series of three-screw pumps for industrial applications. In 2001, the external gear pump market saw the introduction of a new series of products patented and marketed under the name Continuum®, which redefined the concept of silent pump in the "mobile" and "industrial" sectors. In parallel, the company has developed a quality system compliant with ISO 9001 and ISO / TS 29001 standards, recognizing in the commitment to their satisfaction a reference consistent with its corporate strategy.

Our Vision.

Settima Meccanica wants to be an independent and reliable partner for customers and together with them develop innovative technical solutions that can improve the world, creating value for all stakeholders.

Our Mission.

Settima Meccanica wants to achieve full customer satisfaction by providing cutting-edge hydraulic products and top-level support service in the sectors in which it operates.

Our Quality Policy.

To achieve the set objectives, the General Management undertakes to develop a medium and short-term strategy, communicating it to the interested parties in the forms and ways deemed most appropriate.

Customer satisfaction, both with respect to product expectations and to the service received, is the primary objective for all employees and for our partners, in order to guarantee the future development of the company.

People are at the center of the project. Motivated and trained employees are a necessary condition for achieving the expected results.

In this perspective, the safety and health of employees and visitors are a priority and a necessary condition.

The efficiency of the production plants and processes, together with their constant modernization, are equally important conditions to ensure that the defined plans are implemented, generating the resources to meet the needs of the interested parties and to finance the development of Settima Meccanica.

Research and development of new products is the key to realizing our future.

Respect for the law and the search for sustainable solutions in the long term are an indispensable and non-derogable complement.

To achieve the above, Settima Meccanica makes use of all the tools and methods deemed necessary, committing itself to find the resources necessary for its development and to define, in more detailed documents, measurable objectives that are monitored during the annual reviews by of the Management.

In order to implement a continuous improvement process, in addition to «Risk-based thinking», methods related to «Lean thinking» or «lean thinking» are recognized and practiced. In addition to the reference standards, of which Settima Meccanica undertakes to meet the requirements, the validity of the tools recommended by the IATF 16949: 2016 standard (FMEA, APQP, Control plan, PPAP, SPC, MSA, 8D, etc.) is recognized.

The extension of the application of these tools to products and processes intended for some selected markets and / or customers is one of the means used to achieve the set objectives. This Quality Policy is verified and updated according to the evolution of the reference context and the assessments made during the Management Review.
